Education

ABES Institute of Technology — Ghaziabad
B.Tech *— Computer Science and Engineering* — *Nov 2021 – July 2025*

Technical Skills

Languages: JavaScript, Java, C++, Python, SQL, HTML, CSS

Frameworks: React.js, Node.js, Express.js

Databases: MongoDB, MySQL

Tools: Git, GitHub, n8n Automation, Postman, JWT, MongoAtlas

Others: Data Structures & Algorithms

Experience

JIPANDITJI — Jan 2026 – Present
Full Stack Intern — *Ghaziabad, India*

- Developing and maintaining scalable full-stack web applications using **React.js, Node.js, and Express.js**, delivering responsive and user-friendly platform features for the Jipanditji web application.
- Building modular and reusable **React.js components** with hooks and optimized state management to enhance UI performance and improve overall user experience.
- Designing and integrating secure **RESTful APIs** using **Node.js** and **Express.js** to enable seamless communication between frontend and backend services.
- Managing relational databases using **MySQL with Sequelize ORM**, implementing efficient schema design, CRUD operations, and query optimization for reliable data handling.
- Collaborating in feature development, debugging, and performance optimization to improve application stability and streamline workflows for the Jipanditji platform.

Projects

Secure Authentication & User Onboarding Web Application — *MERN, CORS, Axios, n8n Automation* — Live

- Designed and deployed a **fully functional authentication system** with clean and responsive **Sign Up and Login UI**, ensuring an intuitive and user-friendly experience.
- Implemented **secure authentication and authorization** using **MongoDB**, including **password hashing, session management, protected routes**, and **robust form validation with error handling** to ensure secure credential storage and improved user experience.
- **Integrated** an **n8n automation workflow** triggered on every new user signup to send automated welcome emails and optionally log user data to external services such as **Google Sheets**.

Mock E-Commerce Cart System — *MongoDB, Express.js, React.js, Tailwind* — Live

- Designed and developed a **complete e-commerce cart workflow**, enabling seamless **product browsing**, add-to-cart functionality, item removal, and real-time quantity adjustments with instant UI updates.
- Implemented **dynamic pricing logic** including subtotal calculation, quantity-based price updates, and cart total computation using centralized **state management** to ensure data consistency across components.
- Integrated a **secure backend architecture** to manage cart operations, product availability, and pricing data, ensuring reliable data synchronization between frontend and backend services.

AI Virtual Assistant — *Google Gemini API, MERN, Cloudinary, JWT, bcrypt* — Live

- Designed and developed an **AI-powered Virtual Assistant** using the **Google Gemini API** integrated with the **MERN stack (MongoDB, Express.js, React.js, Node.js)** to deliver intelligent, context-aware conversational experiences.
- Implemented advanced **user personalization features**, including customizable response tones, behavior preferences, and profile-based configurations, allowing users to tailor assistant behavior based on individual needs.
- Built and integrated **secure and scalable RESTful APIs** to enable encrypted communication between frontend and backend systems, ensuring reliable real-time data exchange and secure handling of user data.
